

## ICU#10 – Worldwide Upcoming Innovation Drivers

### Method, raw clusters and reference list

Pierre Bitard – ANRT  
for EC project INNO - GRIPS

#### 1. Method

1. This ICU is based upon a semantic analysis of a selection from about 22 000 articles from international Press Agencies, newspapers and specialised journals, collected from April 2008 to June 2009. By definition, all results presented are 'as of' the period concerned.
2. In addition to Press Agencies News and to specialised journals, the newspapers are the most important ones of about 20 countries: China, Denmark, France, Germany, India, Indonesia, Ireland, Israel, Italy, Japan, Korea, Russia, Spain, Sweden, Swiss, Taiwan, Turkey, UK and the US (Cf. the reference list below).
3. In the first place, the articles are collected because they contain the root word: "innovat\*".
4. A first selection was made to extract the articles published from March to June 2009; after cleaning this group adds up to slightly more than 6,300 articles.
5. Then, we focused on those articles which deal with 'transition' or 'transformation'. Once the relevance of the selection has been double-checked, 426 articles in the database were found to correspond to this set of criteria. They were therefore subject to the semantic cluster analysis.

#### 2. Clustering

The higher level clusters only are presented hereafter; analysing the clusters entails getting back to the documents that structure them.

**Cluster 1:** drug, bank, crisis, economy, market, company, healthcare, government, sector (188 documents)

**Cluster 2:** energy, student, school, air, building, program, climate, college, science, party (124 documents)

**Cluster 3:** Cisco, network, service, customer, communication, Google, technology, software, provider, spectrum (114 documents)

NB: As a reminder: the clustering analysis is based upon a variant of 'k-means', classic 'bags of words' type; we have chosen to have a maximum of 3 groupings, based on proximities to the entities: 'companies' and 'common-nouns'.
