

ICU#11 – City Greening Method, raw clusters and reference list

Pierre Bitard – ANRT
for EC project INNO - GRIPS

1. Method

1. This ICU is based upon a semantic analysis of a selection from about 29 000 articles from international Press Agencies, newspapers and specialised journals, collected from April 2008 to June 2009. By definition, all results presented are '*as of*' the period concerned.
2. In addition to Press Agencies News and to specialised journals, the newspapers are the most important ones of about 20 countries: China, Denmark, France, Germany, India, Indonesia, Ireland, Israel, Italy, Japan, Korea, Russia, Spain, Sweden, Swiss, Taiwan, Turkey, UK and the US (*Cf. the reference list below*).
3. In the first place, the articles are collected because they contain the root word: "innovat*".
4. A first selection was made to extract the articles that contain a reference to cities (or synonym), from June 2008 to September 2009; after cleaning this group adds up to about 5,300 articles.
5. Then, we carried out a cluster analysis on those articles based on *COMPANY NAMES* and on the *ADJECTIVES* used in the articles. Of the five clusters obtained, Cluster 3 was grouping articles that mainly dealt with 'green' and the likes, i.e.:
Cluster: "Green, environmental, solar, sustainable, electric, urban, renewable, residential, clean, concrete (989 documents).
6. Eventually, these 989 documents were subject to the semantic cluster analysis -cf. 2.

2. Clustering

The higher level clusters only are presented hereafter; analysing the clusters entails getting back to the documents that structure them.

Cluster 1: *green*, environmental, urban, sustainable, local, public, waste, national, affordable (427 documents)

Cluster 2: *concrete*, residential, steel, east, structural, architectural, south, real, commercial, downtown (294 documents)

Cluster 3: *electric*, solar, renewable, hybrid, automotive, clean, Honda, smart, Ford, Toyota (124 documents)

NB: As a reminder: the clustering analysis is based upon a variant of 'k-means', classic 'bags of words' type; we have chosen to have a maximum of 3 groupings, based on proximities to the entities: 'companies' and 'common-nouns'.
